

# Real-time Forecast Combinations for the Oil Price<sup>\*</sup>

Anthony Garratt<sup>†</sup>, Shaun P. Vahey<sup>‡</sup>, Yunyi Zhang<sup>§</sup>

September 13, 2018

NOT FOR PUBLICATION: download from <https://www.niesr.ac.uk/real-time-forecast-combinations-oil-price>

## Appendix to Garratt, Vahey and Zhang (2018)

### (I) Shorter evaluation sample, 1992:01–2012:09

Our results from the narrow replication, using the evaluation sample examined by Baumeister and Kilian (2015) are shown in Tables A-1a and A-1b. These results use the same WTI and RAC measures considered by those authors. The results confirm the main findings of their paper. Equal weight point combinations have lower MSPE ratios and higher success ratios than inverse MSPE weights for most horizons. The corresponding recursive MSPE and success ratios for the Brent measure, with the same 1992:01 to 2012:09 evaluation sample are displayed in Table A-1c.

---

<sup>\*</sup>We thank Lutz Kilian, Christiane Baumeister, Beili Zhu, Badi Baltagi, and an anonymous referee for helpful comments. Data, data documentation and a not for publication Appendix are available from <https://www.niesr.ac.uk/real-time-forecast-combinations-oil-price>.

NOTES: MH represents monthly forecast horizons. Boldface indicates improvements relative to the no-change forecast. As a rough guide, p-values of a Harvey, Leybourne, and Newbold (1997) small-sample adjustment of the Diebold and Mariano (1995) test are reported in brackets after recursive MSPE ratios. We also report p-values for the Pesaran and Timmermann (2009) test for the null hypothesis of no directional accuracy in brackets after success ratios. \* denotes significance at the 10% level and \*\* at the 5% level.

NOTES: MH represents monthly forecast horizons. Boldface indicates improvements relative to the no-change forecast. As a rough guide, p-values of a Harvey et al. (1997) small-sample adjustment of the Diebold and Mariano (1995) test are reported in brackets after recursive MSPE ratios. We also report p-values for the Pesaran and Timmermann (2009) test for the null hypothesis of no directional accuracy in brackets after success ratios. \* denotes significance at the 10% level and \*\* at the 5% level.

### (III) The inclusion of futures-based forecasts

Analysing the effect of including the futures-based forecasts, in Table A-3a and A-3b we compare the the forecast accuracy of equal weight combinations with and without futures-based forecasts for the 1992:01-2012:09 and 1992:01-2017:12 sample periods at horizons 18 to 24 months for RAC and WTI. As with Brent in the main text, the inclusion of futures-based forecasts at these horizons reduces MSPE ratios and raises the success ratios. Table A-4 additionally presents the effect of including the futures-based forecasts for the Brent measure in the 1992:01-2012:09 evaluation sample.

## (IV) Global Real Economic Activity Indexes

Hamilton (2018) proposes an alternative measure of global economic activity to Kilian (2009). Two rea series are plotted in Figure A-1, see the online dataset documentation.

If we use Hamilton's global economic activity measure in the VAR, the forecast performance is fairly similar, and the influence on the forecast produced using the equal-weight combination is negligible. The results are presented in Tables A-5, A-6, and A-7 for the three real oil prices measures.

Figure A-1: Kilian (2009) and Hamilton (2018) Measures of rea

NOTES: MH represents monthly forecast horizons. Boldface indicates improvements relative to the no-change forecast. As a rough guide, p-values of a Harvey et al. (1997) small-sample adjustment of the Diebold and Mariano (1995) test are reported in brackets after recursive MSPE ratios. We also report p-values for the Pesaran and Timmermann (2009) test for the null hypothesis of no directional accuracy in brackets after success ratios. \* denotes significance at the 10% level and \*\* at the 5% level.

Table A-7: Forecast Accuracy for BRENT, VAR & Equal Weight Combination, using Kilian (2009) and Hamilton (2018) rea

Evaluation 1992:01 to 2012:09				Evaluation 1992:01 to 2017:12
